

SUCCULENT CARE & FEEDING

VARIETY	LIGHT NEEDS	WATERING	FEEDING (SPRING/SUM)
Echeveria	Bright, direct sun	Soak & dry completely	Balanced 10-10-10 monthly
Haworthia	Bright, indirect light	Every 2-3 weeks	Diluted liquid food (1/4 strength)
Jade Plant	Full sun to partial shade	When top 1" is dry	Slow-release granules
Aloe Vera	Indirect sunlight	Deeply but infrequently	Once in early spring
Sedum (Stonecrop)	Full sun	Low water once established	Light compost top-dress

***General Rule:** Most succulents require well-draining cactus mix. Avoid feeding during winter dormancy. Always ensure pots have drainage holes to prevent root rot.*
